

## XM2010

The XM2010 was designed and developed specifically for the sustained harsh environment of the modern battlefield using state-of-the-art technology, manufacturing processes, and corrosion resistant materials. As an upgrade to the combat proven M24 Sniper Weapon System, the XM2010 is chambered in 300 Win Mag for extended effective range using the M24 700 action, and has proven out-of-the-box 1 MOA accuracy. The XM2010 features the new Remington Arms Chassis System (RACS) with a folding stock that allows for adjustment of the length of pull and cheek height and captures the bolt handle when folded. This allows the operator to configure his weapon to his personal physical requirements and transport the system more easily. Additional chassis features include a monolithic rail with removable rail pieces and cable routing guides that maximize rail insert space, co-align electrooptics, and manage electric cables. Finally, the XM2010 features such end user driven enhancements as a 5-round detachable box magazine that allows the operator to quickly reload the weapon, a Leupold long range variable powered optic, and the Advanced Armament Corp TITan quick detach sound suppressor. The XM2010 – an evolutionary leap in precision engagement capability and survivability.
