

# REMINGTON 700 ESR-1

The Remington 700 Enhanced Sniper Rifle (ESR-1) represents the latest evolution of the world's most trusted precision rifle platform – the Remington Model 700.

The 700 ESR-1 features the new Remington Arms Chassis System (RACS) with a folding stock that allows for adjustment of the length of pull and cheek height and captures the bolt handle when folded. This allows the operator to configure his weapon to his personal physical requirements and transport the system more easily. The 700 ESR-1 can be tailored to meet any requirement as a base rifle, or as part of a combat-ready sniper weapon system including a variety of top-tier optics, Advanced Armament suppressor, bipod, deployment kit, and hard-side case with nested drag bag. Available in a short action configuration chambered in .308 Win (7.62x51mm NATO), the Remington 700 ESR-1 offers a solution for the professional shooter.

Remington's innovative free-float tubular handguard features a one piece 0 or 20 MOA Monolithic rail, and removable 2" and 4" rail sections

Barrel	Overall Length	Weight	LOP	Cheek Adj.	Fire Control	Max Effective Range
